## **CERVICAL ACCELERATION-DECELERATION TRAUMA**

This lecture by Dr. Kirk Eriksen was provided at a seminar for attorneys; however, the viewer will get a better appreciation for cervical acceleration-deceleration trauma (CAD) and the seriousness of this injury. Doctors will learn how to document CAD injuries in a thorough manner. An episode of the 'Legal View' television show is included where Dr. Eriksen is interviewed and discusses pediatric injuries related to automobile accidents and other related issues. The following topics related to CAD trauma will be covered:

- Long-term prognosis for cervical trauma
- Conducting a Consult for patients involved in a CAD trauma
- Documenting various complicating factors involved in each accident
- The 'Law of Conservation of Linear Momentum' and how this relates to a CAD trauma
- Phases of CAD trauma
- S-Shaped curvature of the neck after CAD trauma
- Low speed CAD trauma
- Patient case history for those injured in motor vehicle accidents
- Calculating an apportionment for patients with pre-existing complaints
- Outcome assessments used to document patients' injuries
- Chiropractic management of CAD trauma patients
- Performing dual inclinometry to measure spinal range of motion more accurately
- Surface electromyography and the 'flexion-relaxation phenomenon'
- Posture analysis and how this impacts chiropractic care and indicates spinal health
- Pre and Post radiographic corrections after upper cervical chiropractic care
- MRI evaluation pre and post care and the benefit of upright imaging
- Various negative prognostic indicators involved with CAD trauma cases
- Pediatric injuries from motor vehicle accidents
