## **THE SCIENTIFIC VALIDITY OF UPPER CERVICAL CHIROPRACTIC CARE**

This DVD is an edited combination of three lectures that help to provide a cogent argument for the clinical and scientific efficacy of upper cervical chiropractic care (UCCC). An abundance of case reports and studies will be presented that weave a compelling mass of evidence regarding the deleterious effects of the subluxation and the possible beneficial results of UCCC. There is a logical chain of arguments that support specific upper cervical work. This chain is supported by some evidence at each link, with the evidence for some aspects being stronger than others. Given the anatomical, biomechanical, and neurological complexity of the upper cervical spine, this aspect of chiropractic care is an appropriate approach to adjust the upper cervical subluxation. The published research involve various levels of scientific evidence that range from case studies to Randomized Controlled Clinical Trials and in no way ‘proves’ chiropractic as a ‘treatment’ for diseases or disorders. This DVD also covers some issues related to insurance guidelines, the stroke controversy, as well as medical iatrogenesis.

After viewing this video you should develop a better understanding of the literature related to the following issues of upper cervical chiropractic care:

- Studies involving UCCC ranging from various musculoskeletal symptoms to conditions affecting almost every organ system of the human body including the following: Arnold-Chiari malformation, asthma, autism, Bell’s palsy, fibromyalgia, functional leg length inequality assessment, headaches, hypertension, immune function, mental disorders, multiple sclerosis, trigeminal neuralgia
- Practice-based studies related to upper cervical chiropractic care
- Issues related to insurance guidelines and subluxation based care
- X-ray safety and radiation reduction
- Issues related to the alleged association between cervical manipulation and vertebrobasilar accidents
- Issues related to medical care and iatrogenesis

**Full length DVD (110 min.) can be purchased for \$55**
